

Mobile Payment Made Easy

Contactless payments are fast becoming the most convenient way for customers to pay. Now with contactless payment stickers, customers can turn their mobile phone into a payment device. The process of enabling a customer for mobile payments is as simple as attaching the sticker onto their mobile and start paying with it. No need to worry which brand handset works, no searching around for an app. Simply tap the phone on the contactless/NFC compatible POS terminal to make the payment. Contactless stickers can be issued as a complement to a standard payment card or as a standalone solution, the easiest way to enhance the payment options for customers.

Product Features

- » Compact size (Two options):
 - · 35mm x 51mm card format
 - · 35mm x 40mm soft, flexible format
- » Certified by MasterCard. Other schemes under certification
- » MIFARE option available

The MULTOS NFC Sticker

MULTOS NFC contactless sticker is a form factor that is smaller than a standard credit card which can easily turn a mobile handset into a new way to make contactless payments. Multos International now offers a contactless sticker solution, qualified to meet the performance and security criteria that we are renowned for. The MULTOS NFC sticker is based on our latest ML4 platform – the same product that is used in contactless and dual-interface card products today – and therefore also leverages the standard MULTOS benefits that come with the technology. That means issuing the MULTOS NFC contactless sticker utilises exactly the same processes and systems as for personalising a card. The solution is available today for MasterCard projects, with other payment brands currently in development.
